Alert icon and overlay display control: Icon is displayed when “newness” exists within the given task family (task family illustrated is Buying). When displayed the icon is a control that displays the alerting overlay. See Alerting Overlays for details.

“Newness” exists when there is at least one of the following: (1) A new listing or request (appraisal or list request) is in the inbox for the given category. (2) A new message or offer exists on a listing or request in the given category.

If “newness” alerting icon is displayed for a given category then the icon will “pulse” or visually call attention to itself for each additional item of newness at the time of origination for a given period of time (ie; 3 seconds).

Alerting icon and associated interaction controls are in a no display state when Listing(s) that generated the “Newness” state have been visited by user. Additionally they are in a no display state from log in if no “newness” exists up until “newness” exists.
- 2

Listings Counter: This displays the count of items (Listings and “Requests”) within a given task family. If one or more items (Listings and “Requests”) have not been viewed then the counter is displayed in an emphasized state (bolded text).
